

icoone® superior technology in your hands

Today, **icoone®** technology can be found in the best health and beauty centres worldwide. Entering the world of **icoone®**, you gain access to an advanced technology as well as a wide range of services.

Even though the **icoone®** system is very simple to use due to its many practical similarities with manual massage, we nonetheless take great care of the training of operators in order to ensure that every session will be of high quality, and that the solutions offered are always tailored to meet the different needs of patients and clients.

High teaching standards, faultless preparation and a continuously evolving commitment are the 3 key attributes of our **icoone® Training Team**: a group of world-recognized experts including physicians, osteopaths, physiotherapists and beauty specialists constantly engaged in studying and improving teaching tools and application protocols so as to ensure an increasingly thorough and effective use of **icoone®** treatments.

With icoone® we are confident of giving you the best technology for the best possible results...

icoone® for beauty care

localised fat deposits / **cellulite** / **saddlebags** / **silhouette remodelling** / skin laxity / **sagging of the inner thighs or inner arms** / **stretch marks** / **firming of the breasts** / **firming of the face, neck and the cleavage** / **deep wrinkles** / **expression marks**

icoone® for health care

fibrosis / **oedema** / **scars** / **burns** / lymphoedema / **stypsis** / **muscle contractions** / **inflammation of aponeurosis** / neck pains / **pre and post sports muscle conditioning**

Added values

- 1 Two hands and pleasant treatments
- 2 Delicate skin massage
- 3 M.M.A.S. technology for visible results in less time
- 4 Established application in the medical field
- 5 Respect the skin, and dedicate treatments for sensitive and loose skin
- 6 Non-invasive technology
- 7 It does not conflict with other any beauty technology
- 8 From 20 minutes treatments
- 9 Worldwide diffusion of equipment

ONE TOUCH TO PERFECTION
HANDMADE BEAUTY

A new way of treating the skin

icoone® is the answer to the extraordinary insight into the structure of connective tissue by Prof. Jean-Claude Guimberteau, a specialist in reconstructive surgery.

Prof. Guimberteau has shown that the subcutaneous tissue is made of a network of infinite micro vacuoles, organised in an arrangement that seems chaotic and fractal in its appearance and that constitutes the main element, the functional unit of the tissue. Each vacuole has therefore a volume, walls, a certain shape, sides and a content.

This new vision of **connective tissue as a network of vacuoles** represents a clear departure from the traditional notion of a layered structure and points to the need for a new and more effective method of treating the various pathologies that affect the subcutaneous tissue.

The combined scientific research and the technological innovation of icoone® allow the creation of a new approach for the treatment of *E.F.P.**, both in the medical field (treatment of oedema, fibrosis, etc.) and in that of beauty care (reduction of localized fat deposits and treatment of skin laxity), offering extraordinary results even in the most difficult cases.

**EDEMATOUS-FIBROSCLEROTIC PANNICULOPATHY*

Icoone®

icoone® is a patented appliance consisting in a set of handpieces with motorised rollers equipped with an array of micro alveoli designed to produce **Multi Micro Alveolar Stimulation or M.M.A.S.**

Thanks to the mechanical action and fractionated suction generated by the rollers, the skin receives **1180 micro stimulations per dm²**. The micro alveoli incorporated into the rollers stimulate the vacuoles located in the tissue, delivering a treatment characterised by uniformity and precision.

The combination of micro stimulation produced by the rollers and the suction generated centrally through the handpiece ensures that thickened tissues can be treated with no harm to the dermis, avoiding the application of force at a single lifting point.

This revolutionary treatment, painless and non-invasive, gives the skin a genuine 'workout' that targets cellulite and fat, while also promoting the action of fibroblasts in the production of elastin and collagen.

icoone® technology is able to give *exceptional results in toning and firming skin tissue, even for the most problematic cases.*

A customized technology

icoone® can be configured in a variety of ways and associated with different handpieces to provide the best facial and body treatments in both aesthetic and therapeutic applications.

Robotwins

With the **icoone®** system, 2 **Robotwin** handpieces can be used simultaneously and operated in unison, for treatments applied to the whole body. The massage generated by this method produces a sense of profound well-being and delivers visible and long lasting results in half the time.

Robosolo

Certain specific programs will be more effective using the **Robosolo** handpiece. This produces a treatment that is energetic and gentle at the same time, allowing large areas of the body to be massaged with easy and natural movements.

Robomini

icoone® is equipped with the smallest motorised handpiece in the world, the **Robomini**, designed for use on small areas of the face and body, whether in the beauty salon or the health centre. This kind of massage is characterised by a gentle touch and notable precision, even when treating particularly small areas.

Robomicro

The set of handpieces is completed by the **Robomicro**. This is equipped with **3 interchangeable Micro-Heads**, each with its own unique geometry, which can be used to treat gently small areas of the face and body with great precision, generating featherlight and harmonious movements.

Display

The **icoone®** display uses Touch Screen technology allowing the user to access the programs easily and instantaneously as well as set and change the treatment parameters.
